IN THE CLAIMS

Please amend claims 1 thru 31, and add claims 34 and 35, as follows:

Please amend claims 1 thru 31, and add claims 34 and 35, as follows:

1. (Currently Amended) A filter layer for a display, comprising:

oxide particles; and

nano-sized metal particulates coated on and adhered to a surface of the oxide particles [[with]] so as to form a corresponding interface therebetween, and to trigger a surface plasma resonance phenomenon ~~being triggered~~ at said corresponding ~~interfaces of the nano-sized metal particulates and~~ interface between the oxide particles and the nanoxized metal particulates, and to selectively absorb light at at least [[at]] one predetermined wavelength of light.

2. (Currently Amended) The filter layer of claim 1, ~~further comprised of~~ a metal of the nano-sized metal particulates being selected from the group consisting of a transition metal, an alkali metal, an alkali earth metal, and mixtures of any of a transition metal, an alkali metal and an alkali earth metal.

3. (Currently Amended) The filter layer of claim 1, ~~further comprised of~~ a metal of the nano-sized metal particulates being selected from the group consisting of Au, Ag,

Pd, Pt, Cu, Ni, Sb, Sn, Zn, Zr, Se, Cr, Al, Ti, Ge, Fe, W, Pb, and mixtures of any of Au, Ag, Pd, Pt, Cu, Ni, Sb, Sn, Zn, Zr, Se, Cr, Al, Ti, Ge, Fe, W and Pb.

4. (Currently Amended) The filter layer of claim 1, ~~further comprised of~~ an oxide of the oxide particles being selected from the group consisting of an oxide, a silica, a titania, a zirconia, an alumina, and mixtures of any of an oxide, a silica, a titania, a zirconia and an alumina.

5. (Currently Amended) The filter layer of claim 1, ~~further comprised of~~ an amount of the nano-sized metal particulates being in range of [[from]] 0.001 to 0.5 mole percent on a basis of the oxide particles.

6. (Currently Amended) The filter layer of claim 1, ~~further comprised of~~ the nano-sized metal particulates each being of a size within a range of greater than 1 nanometer [[but]] and less than 1 micrometer in diameter.

7. (Currently Amended) A process of preparing a filter layer ~~prepared by a process~~, [[the]] said process comprising:

dispersing an oxide in water to form an oxide sol;

adding a metal salt, a reducing agent, and a dispersing agent to an organic solvent to prepare a metal colloid solution;

mixing the oxide sol with the metal colloid solution to prepare a coating solution with a metal colloid of the metal colloid solution being dispersed in the oxide sol;

applying the coating solution on a face panel of a display to form a filter layer; and

drying the filter layer at room temperature.

8. (Currently Amended) The ~~filter layer prepared by the~~ process of claim 7, further comprising the step, prior to the step of mixing the oxide sol with the metal colloid solution, of controlling an absorption intensity and an absorption peak wavelength of light by adjusting at least one factor selected from the group consisting of kinds, contents and size of metal particulates of the metal colloid solution, and at least one factor selected from the group consisting of kinds and contents of oxide particles of the oxide~~, prior to the step of mixing the oxide sol with the metal colloid solution~~.

9. (Currently Amended) A ~~display~~ cathode ray tube, comprising:

a face panel;

at least one filter layer formed on an inner surface of said face panel, [[the]] said at least one filter layer comprising oxide particles and nano-sized metal particulates adhered to surface of the oxide particles with a surface plasma resonance phenomenon being triggered at corresponding interfaces of the nano-sized metal particulates and the oxide particles to selectively absorb light at least at one predetermined wavelength of light; and

a phosphor layer formed on a filter layer of said at least one filter layer.

10. (Currently Amended) The ~~display~~ cathode ray rube of claim 9, ~~further comprised of the display comprising a cathode ray tube, comprising:~~

~~a face panel;~~

~~at least one filter layer formed on an inner surface of the face panel, the at least one filter layer comprising oxide particles and nano-sized metal particulates adhered to a surface of the oxide particles, the~~ wherein said at least one filter layer ~~providing~~ provides at least one selective absorption peak for light at a corresponding predetermined wavelength of light by induction of [[a]] the surface plasma resonance phenomenon at the corresponding interfaces between the nano-sized metal particulates and the oxide particles~~; and~~

~~a phosphor layer formed on a filter layer of the at least one filter layer~~.

11. (Currently Amended) The ~~display~~ cathode ray rube of claim 10, ~~further comprised of the~~ said at least one filter layer including a plurality of kinds of metals and oxides for the nano-sized metal particulates and the oxide particles to provide a plurality of differing selective absorption peaks for corresponding wavelengths of light.

12. (Currently Amended) The ~~display~~ cathode ray rube of claim 10, ~~further comprised of the~~ said at least one filter layer including a plurality of filter layers each being formed to respectively provide a plurality of selective absorption peaks for light at

corresponding different wavelengths of light.

13. (Currently Amended) The ~~display~~ cathode ray rube of claim 9, ~~further comprised of the display comprising a cathode ray tube, comprising:~~

~~a face panel;~~

wherein said at least one filter layer is formed on an outer surface of [[the]] said face panel~~, the at least one filter layer comprising oxide particles and nano-sized metal particulates adhered to a surface of the oxide particles, the at least one filter layer providing at least one selective absorption peak for light at a corresponding predetermined wavelength of light by induction of a surface plasma resonance phenomenon at corresponding interfaces between the nano-sized metal particulates and the oxide particles; and~~

~~a phosphor layer formed on an inner surface of the face panel~~.

14. (Currently Amended) The ~~display~~ cathode ray rube of claim 13, ~~further comprised of the~~ said at least one filter layer including a plurality of kinds of metals and oxides for the oxide particles and the nano-sized metal particulates to provide a plurality of differing selective absorption peaks for corresponding wavelengths of light.

15. (Currently Amended) The ~~display~~ cathode ray rube of claim 13, ~~further comprised of the~~ said at least one filter layer including a plurality of filter layers formed

to respectively provide a plurality of selective absorption peaks for light at corresponding different wavelengths of light.

16. (Currently Amended) The ~~display~~ cathode ray rube of claim 13, further comprising a conductive film located between the outer surface of [[the]] said face panel and a filter layer of [[the]] said at least one filter layer.

17. (Currently Amended) The ~~display~~ cathode ray rube of claim 13, ~~further comprised of the~~ said at least one filter layer providing an anti-reflection layer.

18. (Currently Amended) ~~The display of claim 9, further comprised of the display comprising a~~ A cathode ray tube, comprising:

a face panel;

at least one first filter layer formed on an inner surface of the face panel;

at least one second filter layer formed on an outer surface of the face panel; and

a phosphor layer formed on a filter layer of [[the]] said at least one the first filter layer, [[the]] said at least one first filter layer and [[the]] said at least one second filter layer each comprising oxide particles and nano-sized metal particulates adhered to a surface of the oxide particles, [[the]] said at least one first filter layer and [[the]] said at least one second filter layer each providing at least one selective absorption peak for light at a corresponding predetermined wavelength of light by induction of a surface plasma

resonance phenomenon at corresponding interfaces between the nano-sized metal particulates and the oxide particles.

19. (Currently Amended) The ~~display~~ cathode ray rube of claim 18, ~~further comprised of~~ wherein any of [[the]] said at least one first filter layer and [[the]] said at least one second filter layer ~~including~~ includes a plurality of metals and oxides for the oxide particles and the nano-sized metal ~~pariculates~~ particulates to provide a plurality of differing selective absorption peaks for corresponding wavelengths of light.

20. (Currently Amended) The ~~display~~ cathode ray rube of claim 18. ~~further comprised of~~ wherein any of [[the]] said at least one first filter layer and [[the]] said at least one second filter layer ~~including~~ includes a plurality of filter layers formed to respectively provide a plurality of selective absorption peaks for light at corresponding different wavelengths of light.

21. (Currently Amended) The cathode ray tube of claim 18, further comprising a conductive film located between the outer surface of the face panel and a filter layer of [[the]] said at least one second filter layer.

22. (Currently Amended) The cathode ray tube of claim 18, ~~further comprised of the~~ said at least one second filter layer providing an anti-reflection layer.

23. (Currently Amended) ~~The display of claim 9, further comprised of the display comprising a~~ A plasma display panel, comprising:

a rear substrate including a plurality of address electrodes disposed on the rear substrate, and a first dielectric layer disposed on the rear substrate and covering the plurality of address electrodes;

a plurality of spacers disposed on the first dielectric layer, [[and]] adjacent ones of [[the]] said plurality of spacers being respectively positioned in opposing relation with respect to an address electrode of [[the]] said plurality of address electrodes to provide a corresponding discharge space;

a plurality of phosphor layers disposed on the first dielectric layer, each of [[the]] said plurality of phosphor layers being respectively formed in a corresponding discharge space provided by adjacent ones of [[the]] said plurality of spaces;

a front substrate including a plurality of scan electrodes and a plurality of common electrodes disposed on the front substrate in a direction transverse to a direction of [[the]] said plurality of address electrodes;

at least one filter layer disposed on [[the]] said front substrate and covering the plurality of scan electrodes and the plurality of common electrodes, [[the]] said at least one filter layer comprising oxide particles and nano-sized metal particulates adhered to a surface of the oxide particles, [[the]] said at least one filter layer providing at least one selective absorption peak for light at a corresponding predetermined wavelength of light

by induction of a surface plasma resonance phenomenon at corresponding interfaces between the nano-sized metal particulates and the oxide particles;

a second dielectric layer disposed on a filter layer of [[the]] said at least one filter layer; and

a protective layer disposed on [[the]] said second dielectric layer.

24. (Currently Amended) The plasma display panel of claim 23, ~~further comprised of the~~ said at least one filter layer including a plurality of kinds of metals and oxides for the oxide particles and the nano-sized metal particulates to provide a plurality of differing selective absorption peaks for corresponding wavelengths of light.

25. (Currently Amended) The plasma display panel of claim 23, ~~further comprised of the~~ said at least one filter layer including a plurality of filter layers formed to respectively provide a plurality of selective absorption peaks for light at corresponding different wavelengths of light.

26. (Currently Amended) ~~The display of claim 9, further comprised of the display comprising a~~ A plasma display panel, comprising:

a rear substrate including a plurality of address electrodes disposed on the rear substrate, and a first dielectric layer disposed on the rear substrate and covering the plurality of address electrodes;

a plurality of spacers disposed on the first dielectric layer, [[and]] adjacent ones of [[the]] said plurality of spacers being respectively positioned in opposing relation with respect to an address electrode of [[the]] said plurality of [[the]] address electrodes to provide a corresponding discharge space;

a plurality of phosphor layers disposed on the first dielectric layer, each of [[the]] said plurality of phosphor layers being respectively formed in a corresponding discharge space provided by adjacent ones of [[the]] said plurality of spacers;

a front substrate including a plurality of scan electrodes and a plurality of common electrodes disposed on the front substrate in a direction transverse to a direction of [[the]] said plurality of address electrodes, and a second dielectric layer disposed on [[the]] said front substrate and covering [[the]] said plurality of scan electrodes and [[the]] said plurality of common electrodes;

at least one filter layer disposed on the second dielectric layer, [[the]] said at least one filter layer comprising oxide particles and nano-sized metal particulates adhered to a surface of the oxide particles, [[the]] said at least one filter layer providing at least one selective absorption peak for light at a corresponding predetermined wavelength of light by induction of a surface plasma resonance phenomenon at corresponding interfaces between the nano-sized metal particulates and the oxide particles;

a third dielectric layer disposed on a filter layer of [[the]] said at least one filter layer; and

a protective layer disposed on [[the]] said third dielectric layer.

27. (Currently Amended) The plasma display panel of claim 26, ~~further comprised of the~~ said at least one filter layer including a plurality of kinds of metals and oxides for the oxide particles and the nano-sized metal particulates to provide a plurality of differing selective absorption peaks for corresponding wavelengths of light.

28. (Currently Amended) The plasma display panel of claim 26, ~~further comprised of the~~ said at least one filter layer including a plurality of filter layers formed to respectively provide a plurality of selective absorption peaks for light at corresponding different wavelengths of light.

29. (Currently Amended) ~~The display of claim 9, further comprised of the display comprising a~~ A plasma display panel, comprising:

a rear substrate including a plurality of address electrodes disposed on the rear substrate, and a first dielectric layer disposed on the rear substrate and covering the plurality of address electrodes;

a plurality of spacers disposed on the first dielectric layer, [[and]] adjacent ones of the plurality of spacers being respectively positioned in opposing relation with respect to an address electrode of [[the]] said plurality of address electrodes to provide a corresponding discharge space;

a plurality of phosphor layers disposed on the first dielectric layer, each of [[the]]

said plurality of phosphor layers being respectively formed in a corresponding discharge space provided by adjacent ones of [[the]] said plurality of spacers;

a front substrate including a plurality of scan electrodes and a plurality of common electrodes disposed on the front substrate in a direction transverse to a direction of [[the]] said plurality of address electrodes, and a second dielectric layer disposed on [[the]] said front substrate and covering [[the]] said plurality of scan electrodes and [[the]] said plurality of common electrodes;

at least one filter layer disposed on [[the]] said second dielectric layer, [[the]] said at least one filter layer comprising oxide particles and nano-sized metal particulates adhered to a surface of the oxide particles, [[the]] said at least one filter layer providing at least one selective absorption peak for light at a corresponding predetermined wavelength of light by induction of a surface plasma resonance phenomenon at corresponding interfaces between the nano-sized metal particulates and the oxide particles; and

a protective layer disposed on a filter layer of [[the]] said at least one filter layer.

30. (Currently Amended) The plasma display panel of claim 29, ~~further comprised of the~~ said at least one filter layer including a plurality of kinds of metals and oxides for the oxide particles and the nano-sized metal particulates to provide a plurality of differing selective absorption peaks for corresponding wavelengths of light.

31. (Currently Amended) The plasma display panel of claim 29, ~~further comprised of the~~ said at least one filter layer including a plurality of filter layers formed to respectively provide a plurality of selective absorption peaks for light at corresponding different wavelengths of light.

32. (Original) A method of preparing a filter layer, comprising:

dispersing an oxide in water to form an oxide sol;

adding a metal salt, a reducing agent, and a dispersing agent to an organic solvent to prepare a metal colloid solution;

mixing the oxide sol with the metal colloid solution to prepare a coating solution with a metal colloid of the metal colloid solution being dispersed in the oxide sol;

applying the coating solution on a face panel of a display to form a filter layer; and

drying the filter layer at room temperature.

33. (Original) The method of claim 32, further comprising controlling an absorption intensity and an absorption peak wavelength of light by adjusting at least one factor selected from the group consisting of kinds, contents and size of metals particulates of the metal colloid solution, and at least one factor selected from the group consisting of kinds and contents of oxide particles of the oxide prior to the step of mixing the oxide sol with the metal colloid solution.

34. (New) A filter layer prepared by the process of claim 8,

35. (New) A filter layer prepared by the process of claim 7,
